PACKAGING UNIT

OUR 6-STEP PACKAGING PROCESS

It is our constant endeavor to deliver quality products to our clients which encourages us to focus on quality at every step of project completion including packaging. From the initial crate preparation to packaging the product, our comprehensive and meticulous approach to natural stone packaging ensures the final delivery of the consignment in an untouched condition. So, let's take a look at the various steps of the packaging process of natural stone tiles adopted at Regatta Universal Exports.

1.

CRATE SETUP

These highly reinforced seaworthy wooden crates are manufactured using solid eucalyptus wood which ensures sturdiness, flexibility, and safety for the packed natural stones inside.

2.

CRATE PREPARATION FOR STONE PACKAGING

The next step is to secure the inner part of the crate by using a polythene and foam sheet on all sides which helps in preventing the damage of stone edges.

3.

PLACING THE NATURAL STONE PRODUCTS IN THE CRATE

Now, the natural stone tiles are systematically put in the crate to ensure the maximum utilization of the available space.

4.

FILLING THE CRATE WITH NATURAL STONE TILES

Once a filling pattern is fixed, all the tiles are placed tightly in the crate to avoid damage. In case of gaps, foam sheets are used to secure the tile surfaces from getting damaged.

5.

SECURING THE CRATE

After the crate is filled, the next thing is to secure the packed products by putting a foam sheet and polythene sheet on top of the crate. This helps in avoiding any kind of accidental damage during transit. Also, the crates are chemically treated and fumigated before dispatch.

6.

SEALING THE CRATE

Eventually, the crate is sealed by fixing the upper part using nails. Another layer of polythene sheet is used from the outside to prevent exposure to the sun, water, and cold. Packaging straps are used to secure the crate from all sides.
